## Exercise 2.2.1

Show that any linear combination of linear operators is a linear operator.

## Solution

Suppose $L_{1}$ and $L_{2}$ are linear operators. Then, by the definition of linearity,

$$
\begin{aligned}
& L_{1}\left(c_{1} u_{1}+c_{2} u_{2}\right)=c_{1} L_{1}\left(u_{1}\right)+c_{2} L_{1}\left(u_{2}\right) \\
& L_{2}\left(c_{1} u_{1}+c_{2} u_{2}\right)=c_{1} L_{2}\left(u_{1}\right)+c_{2} L_{2}\left(u_{2}\right),
\end{aligned}
$$

where $c_{1}$ and $c_{2}$ are arbitrary constants and $u_{1}$ and $u_{2}$ are solutions to a linear homogeneous equation. The aim is to show that a linear combination of $L_{1}$ and $L_{2}, c_{3} L_{1}+c_{4} L_{2}$, is also linear.

$$
\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(c_{1} u_{1}+c_{2} u_{2}\right)=c_{1}\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(u_{1}\right)+c_{2}\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(u_{2}\right) .
$$

We have

$$
\begin{aligned}
\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(c_{1} u_{1}+c_{2} u_{2}\right) & =c_{3} L_{1}\left(c_{1} u_{1}+c_{2} u_{2}\right)+c_{4} L_{2}\left(c_{1} u_{1}+c_{2} u_{2}\right) \\
& =c_{3}\left[c_{1} L_{1}\left(u_{1}\right)+c_{2} L_{1}\left(u_{2}\right)\right]+c_{4}\left[c_{1} L_{2}\left(u_{1}\right)+c_{2} L_{2}\left(u_{2}\right)\right] \\
& =c_{3} c_{1} L_{1}\left(u_{1}\right)+c_{3} c_{2} L_{1}\left(u_{2}\right)+c_{4} c_{1} L_{2}\left(u_{1}\right)+c_{4} c_{2} L_{2}\left(u_{2}\right) \\
& =c_{1} c_{3} L_{1}\left(u_{1}\right)+c_{1} c_{4} L_{2}\left(u_{1}\right)+c_{2} c_{3} L_{1}\left(u_{2}\right)+c_{2} c_{4} L_{2}\left(u_{2}\right) \\
& =c_{1}\left[c_{3} L_{1}\left(u_{1}\right)+c_{4} L_{2}\left(u_{1}\right)\right]+c_{2}\left[c_{3} L_{1}\left(u_{2}\right)+c_{4} L_{2}\left(u_{2}\right)\right] \\
& =c_{1}\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(u_{1}\right)+c_{2}\left(c_{3} L_{1}+c_{4} L_{2}\right)\left(u_{2}\right) .
\end{aligned}
$$

Therefore, any linear combination of linear operators is a linear operator.
