## Exercise 8

What is the volume of the parallelepiped with sides $\mathbf{i}, 3 \mathbf{j}-\mathbf{k}$, and $4 \mathbf{i}+2 \mathbf{j}-\mathbf{k}$ ?

## Solution

Label each of the sides as

$$
\begin{aligned}
& \mathbf{a}=(1,0,0) \\
& \mathbf{b}=(0,3,-1) \\
& \mathbf{c}=(4,2,-1)
\end{aligned}
$$

The volume of the parallelepiped formed by these vectors is given by the triple product,

$$
\begin{aligned}
\mathbf{a} \cdot(\mathbf{b} \times \mathbf{c}) & =(1,0,0) \cdot\left|\begin{array}{ccc}
\hat{\mathbf{x}} & \hat{\mathbf{y}} & \hat{\mathbf{z}} \\
0 & 3 & -1 \\
4 & 2 & -1
\end{array}\right| \\
& =\left|\begin{array}{ccc}
1 & 0 & 0 \\
0 & 3 & -1 \\
4 & 2 & -1
\end{array}\right| \\
& =1\left|\begin{array}{ll}
3 & -1 \\
2 & -1
\end{array}\right|-0+0 \\
& =1[(3)(-1)-(-1)(2)] \\
& =-1,
\end{aligned}
$$

or rather its magnitude: $V=|\mathbf{a} \cdot(\mathbf{b} \times \mathbf{c})|=1$.
