## Exercise 22

For the following exercises, consider this scenario: The weight of a newborn is 7.5 pounds. The baby gained one-half pound a month for its first year.

If the function $W$ is graphed, find and interpret the slope of the function.

## Solution

Because the baby's weight increases at a constant rate, a linear function can be used to model it. The slope is 0.5 , the rate that the baby's weight increases (in pounds per month), and the initial weight is 7.5 (in pounds).

$$
W(t)=0.5 t+7.5
$$
