## Exercise 57

Find a formula for a function f that satisfies the following conditions:

$$\lim_{x \to \pm \infty} f(x) = 0, \quad \lim_{x \to 0} f(x) = -\infty, \quad f(2) = 0,$$
$$\lim_{x \to 3^{-}} f(x) = \infty, \quad \lim_{x \to 3^{+}} f(x) = -\infty$$

## Solution

To make f(2) = 0, put x - 2 in the numerator. To make  $\lim_{x \to \pm \infty} f(x) = 0$ , make sure the degree of the denominator is higher than that of the numerator. To make  $\lim_{x\to 0} f(x) = -\infty$ , put  $x^2$  in the denominator. To make  $\lim_{x\to 3^{\pm}} f(x) = \mp \infty$ , place 3 - x in the denominator.

$$y = \frac{x-2}{x^2(3-x)}$$

$$y = \frac{x-2}{x^2(3-x)}$$

$$0.5$$

$$-4$$

$$-4$$

$$-0.5$$

$$-1.0$$

$$-1.5$$

$$-2.0$$

$$-0.5$$

$$-1.0$$

$$-1.5$$

$$-2.0$$

$$f(x) = \frac{x-2}{x^2(3-x)}$$
